Business Problem:

It's the end of tough year and somehow business manage to earn some profit. Management decided that as it was a tough year so the bonus will be based on the performance of the employees. Below is the slab of Bonus based on the performance. (Performance is based on total sales in $)

Sales	%Bonus
$5001+	30%
$2000 – $5000	20%
Less than $2000	10%

Create a report where management will able to see the bonus amount for employees based on the regions and the name of the employees should be like if the first name is Rahul Tiwari then it should be R.Tiwari in the report.

In this business problem show business how to use Tableau Prep for data manipulation to solve this problem and also solve the same problem using Tableau Desktop data manipulation features as well.
